

ATHLYTIC

Health Report

Age: 26 • Sex: Male

5 Apr 2026 - 5 May 2026

This report summarizes patterns in the data and is not a medical assessment. The data is for informational purposes only and should not be used for medical diagnosis. Consult with a healthcare professional for medical advice.

Report Summary

Over the past 30 days, your Heart Rate Variability increased, while your Resting Heart Rate and Blood Oxygen remained stable.

Understanding Trends

Trends focus on meaningful change over time, not daily fluctuations. We compare your early-period averages to your most recent averages to see whether a metric has meaningfully improved, declined, or stayed stable.

- ↑ Increased: a clear improvement over time
- ↓ Decreased: a clear decline over time
- Stable: small changes within normal variation

Heart Rate Variability

Calculated using the SDNN method and represents your average during sleep or a morning mindfulness session

Current: 72 ms

Baseline: 100 ms

Statistics for Period:

30-Day Average: 100 ms

Highest: 242 ms

Lowest: 36 ms

Trend: ↑

Resting Heart Rate

Calculated using your average during sleep

Current: 57 bpm

Baseline: 57 bpm

Statistics for Period:

30-Day Average: 57 bpm

Highest: 57 bpm

Lowest: 57 bpm

Trend: →

Blood Oxygen

Current: 98 %

Baseline: 98 %

Statistics for Period:

30-Day Average: 98 %

Highest: 100 %

Lowest: 97 %

Trend: →

Activity

Daily Steps

Average: 5.224 steps/day
Daily Heart Rate per Step: 0.0109 (Moderate)

Workouts Completed

Workout Type	Count	Avg Duration
Outdoor Run	9	34 min
